

Oneida Health
exceptional care... always

June 30, 2021

Dear Family Member,

We recently learned of an employee who has tested positive. The employee has not been to work for several days so we feel that there is an extremely low chance of exposure to anyone at the facility. As always, we are taking all the necessary infection control measures to prevent exposure, while continuing to symptom monitor all residents, staff and visitors.

Unfortunately, according to the NY State Department of Health guidance, we once again had to halt visitation for one effected unit until the 14-day period is concluded. All residents and staff are being tested. As long as there are no new cases, visitation will continue as scheduled.

Sincerely,

Fortunato Scerbo III

Administrator
